

Offline Series by BEST

Heavy-duty, stand-alone access control.

BEST's Offline Series delivers robust, efficient, integrated access control. The self-contained cylindrical, mortise, or exit trim locks are battery powered and can be virtually reconfigured, with access and time parameters set at the lock for higher security. Offline Series locks work with Lenel OnGuard and Keyscan Aurora software systems, giving users with existing software more options for upgrade and retrofit applications as well as offering a choice for new users. Designed with powerful hardware for up to 5,000 users and/or events, the Offline Series offers maximum security and flexibility.

Versatile, simple and effective.

Modern technology and a sensible design to meet your access control needs. The system integrates with virtually any existing database, and allows unsurpassed capabilities in storing and retrieving access activity data. And because the locks are offline, individual door access changes can be made quickly and conveniently.

- **Integrated access control.** BEST's Offline Series integrates card reader hardware at the lockset without costly wire runs or complicated frameworks.
- **Robust platform.** Each Offline Series lock tracks up to 5,000 users and/or events at the lock. We designed the Offline Series to work with two types of software—Lenel OnGuard or Keyscan Aurora— to reduce the inefficiency of redundant systems and offer users more choice.
- **Stand-alone management.** The locks are self-contained and battery powered, and can be configured and reconfigured individually with pre-enrolled cards.

Convenient, efficient access control.

Save time and resources with BEST's Offline Series—a self-contained access control solution that makes installation, maintenance, and management faster and easier. With the Offline Series, you won't need wire runs or complex setups. Designed for quick setup and reconfiguring, equipped with easily replaceable component parts for longer product life, and able to dynamically integrate information with existing databases, the Offline Series makes robust access control simple.
